evation in series production, first deliveries to customers

After successfully completing production development work for the evation drive system, FAZUA was able to begin series production this summer at the company's Munich facility. With the first **evation** systems already delivered to customers, the company's goal in the months ahead is to further increase its production volume to keep pace with the growing demand for the pedelec drive system, which is unlike any other on the market today.

Appearance at Eurobike 2017 trade fair in Friedrichshafen

FAZUA GmbH will once again be on hand with its very own trade fair booth at this year's Eurobike show. The event will be held in Friedrichshafen from August 30 to September 2. FAZUA is looking forward to meeting all of the visitors to its booth (number A6-310) and showing them the **evation** drive system.

Series-produced **evation** drive system components.

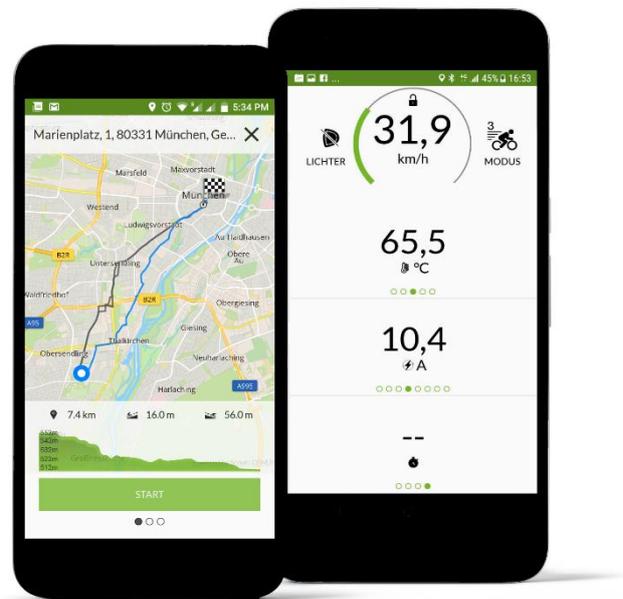

In addition to the booth displays, all visitors will have a chance to experience the **evation** pedelec drive system live for themselves in the Eurobike Demo Area. Three test tracks set up directly on the Friedrichshafen trade fair grounds will provide real-life conditions for visitors to get their hands on FAZUA's drive concept and take it for a test ride to see just how versatile it is and how well it handles.

Partnership with Comodule

FAZUA has also gained a strong partner for bicycle connectivity by teaming up with the German-Estonian company Comodule. Backed by Comodule's know-how, FAZUA will unveil its very own smartphone app at the Eurobike 2017. By adding a number of new interactive features, the app will enhance the rider experience on e-bikes equipped with FAZUA drives.

About FAZUA

FAZUA markets and sells the **evation** brand, an innovative drive system for pedelecs. **evation** provides bicycle manufacturers with a way to simply integrate a powerful lightweight drive system into their models. The Drivepack, which weighs just 3.3 kg and houses the motor, electronics and Battery Pack, can be installed and removed on the bike's downtube with a quick click release – giving riders the ability to easily convert their bicycles into pedelecs and back again in no time at all. The patented **evation** drive system makes it possible to create bicycles that feature a look and weight profile unlike any other on the market, all while giving users dynamic rideability and superior riding pleasure.

The FAZUA app for Android and iOS will be on display at the Eurobike 2017 in Friedrichshafen.
