Fazua is changing
eBiking as you know it.

01 WHO WE ARE

Founders and
managing directors
Johannes Biechele
and Fabian Reuter.

There are few markets that are developing as fast as the eBike market. One of the reasons for this is the Munich-based company Fazua.

With the innovative evation drive system, the team, led by Johannes Biechele and Fabian Reuter, has developed an electric drive system that conveys the natural driving feel of a non-motorized bicycle in an easy, compact, and elegant way. The icing on the cake: Everything is made in Ottobrunn near Munich, Germany.

The arms race between the manufacturers is over and the clear trend now is integrable eBike drive systems, which finally convert eBikes into aesthetic pieces of sports equipment.

Renowned manufacturers already offer premium bikes with the Fazua drive system. Whether road, gravel, MTB or urban bikes, they all rely on the high quality that one may expect from a "Made in Germany" product.

02 THE EVATION DRIVE SYSTEM

Uniquely light, modular, and sensitive: With a total weight of 4.6 kilogram, the Fazua evation drive system is probably the most discreet mid-engine eBike system on the market.

GOOD TO KNOW

1. The more power you put on the pedals, the more the system supports you.

2. The drive system supports you most efficiently at a cadence between 65 and 85 RPM. This is where you get the optimal support.

Bottom bracket, drivepack, and replaceable battery are so unobtrusively integrated into the bike that they are made for the demands of sporty bike and eBike fans who want to ride with gentle and optional support.

The low weight of the drive system is positioned centrally above the bottom bracket of the bike. This creates a natural riding experience, which you otherwise only get from non-motorized bicycles.

The drivepack can be easily removed from the down tube and clicked in again with just one single move.

In a matter of seconds, you can transform your pedelec into a bicycle. It does not matter if you drive with or without assistance, you will never feel any resistance from the engine you have to fight against - just like on a normal bike.

No matter if you are off-road or in the city - the evation hybrid drive system always supports you optimally.

The lightest and most compact drive system in its field.

Fazua evation - the modular Drivesystem for hybrid eBikes.

A German engineered masterpiece.

Remote

Simplistic and intuitive handlebar remote for maximal control.

Remote fX

Fully frame integrated remote with sensitive touch surface.

Battery

250 Wh that will bring you and your fitness to the next level.

Perfect for sporty ambitious riders.

At speeds above 25 km/h a freewheel decouples the engine completely from the bottom bracket gearbox.

Evation allows you to pedal without support at these speeds and at the same time without any resistance. Thus, you are only supported, if you are just starting up, having to deal with headwind, or if you ride steep uphill sections.

This makes it particularly interesting for ambitious athletes who can easily ride over 25 km/h on flat ground, but need support as soon as it gets steeper or the wind is blowing exhaustingly.

You can choose between three support levels:

BreezeMode for restrained support, such as through a gentle tailwind. The moderate RiverMode and RocketMode when the mountain gets steeper.

In addition, there is a neutral mode in which the system is completely decoupled and you ride along just like on any normal bike.

Drivepack

Removable motor and battery unit with a total weight of just 3.3 kg.

Bottom Bracket

A two-sided torque measurement and additional cadence measurement ensure the optimal support of the system, which is efficiently transmitted to the crank via an angular gearbox.

Battery

Extraordinary compact and lightweight battery with only 1.38 kg.

The Downtube Cover

- › Weight: 490 g
- › Exchange motor and battery unit with downtube cover within seconds.
- › Fits any Fazua-powered bike.

The 490 g light aluminum cover is hollow and fits exactly into the down tubes of all bikes equipped with the sporty evation drive. The hollow space can then be used as practical storage for **repairkits, tools or food.**

By exchanging the motor unit and battery with the cover, the bike weight is decreased by 2.9 kg.

The maximum range varies with the speed you travel with. If you ride faster than 25 km/h, the system consumes no energy. But if you ride with exactly 25 km/h at the highest level of support you will have a reach of 65 km (40.4 miles) on flat ground.

Altimeter/Charge	
Mountain Bike	750 hm
Road Bike	1300 hm
Type	MID-ENGINE
Total Weight	4.6 Kg
Support Levels	3
Maximum Torque	60 Nm
Battery Capacity	250 Wh

03 CATEGORIES

Cycling evolved quickly in the last 10 years. There are more subcategories and diverse riders than ever before. So you might ask yourself, for whom is the Fazua evation the perfect fit?

Clearly the system fits to all riders who aim to have a subtle support and still have a desire to feel the tension in their muscles. No matter if Gravel-, Road-, MTB, or Urbanbike: Fazua is the system of choice for sportive personalities.

04 OUR SERVICE CONCEPT

We want you to be happy with your Fazua drive system. That's why eBike service with is comfortable, uncomplicated, and personal.

With the intuitive Fazua toolbox software you can even realize firmware updates and continuously optimize the performance of your drive system. The diagnostic function also allows you to check the condition of the system. You can also leave the service to a real expert. Called Fazua Servicepartner.

Your certified Fazua Servicepartner is a bicycle dealer specially trained in our drive system and the associated service toolbox and is always close to you. Our service and dealer network throughout Europe is growing rapidly!

For questions and concerns you can reach us quickly and at any time via service@fazua.com

Expertise through training. Your Fazua Servicepartner knows exactly how to help you.

Fazua offers you an extensive network of Fazua Servicepartners throughout Europe. Find a dealer map in our webstie.
